

漫画で学ぶ — MANGA DE MANABU

Claude-kun & Obsidian-san · Skills, Memory and Sync, in eight pages

A story of AI and memory — from the CSPS AI Dojo, August 2026

AI-assisted artwork (Google Nano Banana), directed and verified by humans · the story practises what it preaches · free to copy, adapt and share

Every morning starts from zero

The AI forgets when the conversation ends. Nothing carries over by itself — every day, you would explain the project again.

A Skill is a recipe you wrote

Write the method down once, and any assistant cooks the same dish, every time. And a card can be handed to a colleague — a memory cannot.

A Memory is a waiter who remembers you

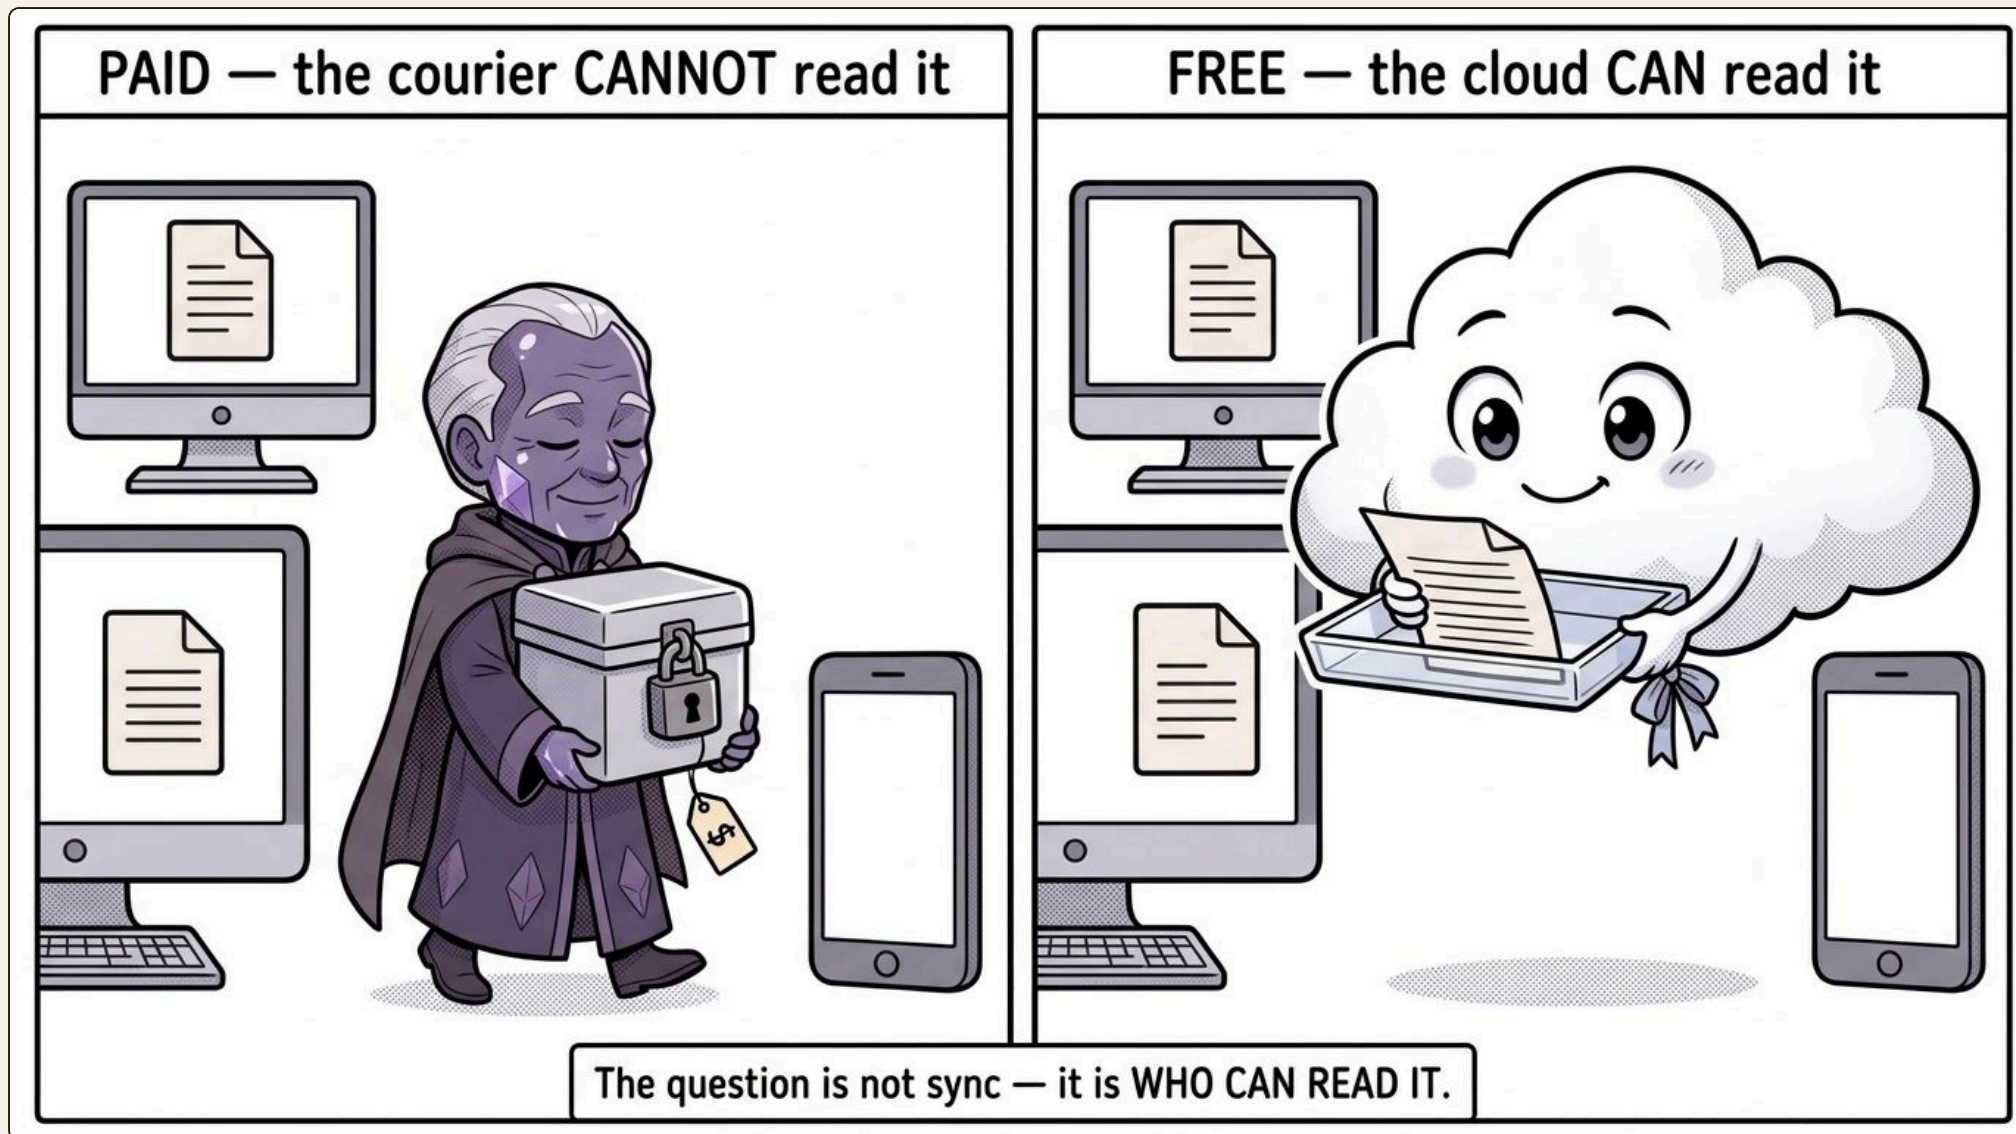

Convenient — and it keeps **everything** you said, including things you would never have written down. Review what it holds; delete what should not be there.

One page per project

DECIDED · STILL OPEN · SOURCES · PASTE TOMORROW. The file is memory **you** control — readable, portable, and free.

Sync is a question about who can read it

The paid courier cannot read the page; the free cloud can. Neither is evil, and both deliver. Choose knowingly — and for internal work, ask your organisation first.

The loop: two prompts a day

Evening: "Before we close — write today's note." Morning: paste it into any assistant, and it continues where you stopped. Fifteen seconds each way.

Nothing is lost

The AI forgets today. Your file remembers tomorrow.

The habits are free. The convenience is paid. Start tonight, with one project file.
