

The Afternoon Field Guide

Two adventures before the belts: your voice, then the fourth tool. Page 2 holds six missions you simply read aloud.

Part 1 · Talking to your phone

13:30 – 14:45

Why voice? Half of an admin day happens away from the desk. Typing needs a desk; speaking needs nothing. Today you learn to **enter data by talking** — and to trust it, because you will also learn to check it.

The one rule: speak messy

Talk the way you talk. Pauses are fine. “Um” is fine. Mixing Malay and English is fine. You do NOT need to speak punctuation or sound like a newsreader — **structuring is the AI's job, not yours**. The only two habits that matter:

- Say **money and dates in full words**: “sixteen thousand five hundred dollars”, “the twelfth of September”. (“Sixteen five” can become 16.5.)
- Say **names slowly**, titles included — Hj, Hjh, binti, Awang. Machines drop them; you will fix them.

Where is the mic? (three doors, all free)

1. **The keyboard mic** — the little microphone on your phone's keyboard. Works inside EVERY app. Tap it, talk, tap done.
2. **ChatGPT voice** — the voice icon beside the message box: talk, and it talks back.
3. **Gemini Live** — a flowing conversation; good for thinking out loud.

The five steps (every mission on pages 2–3 uses them)

- (1) OPEN the mic — ChatGPT voice, Gemini Live, or the keyboard mic.
- (2) READ the mission script aloud — about 30 seconds, your ownpace.
- (3) STOP the mic, then ASK the one-line request — watch a table or draft appear.
- (4) CHECK: read the result back against your own words. Every number survived?
- (5) FIX one thing by voice — “change transport to eight thirty” — then done.

Voice safety, three lines: a corridor is a public place — no real names, no IC numbers out loud · today, fictional details only · the read-back IS the check — ten seconds, every time.

Part 2 · The Claude hour

15:00 – 16:00

One new tool, one party trick: paste a table, and Claude draws the chart in front of you — then rewrites it, redraws it, argues with you about it. Same rules, same five-part instructions, new buttons.

Getting in (3 minutes)

1. Go to **claude.ai** (or scan the QR below). Tap “**Continue with Google**” — the account you used all week. Free plan, no card.
2. Stuck? Share your partner's screen — the neighbour's-tool rule. Nobody trains alone.

The chart spell — and the twist

Paste your table (fictional!), then:
 “Draw a bar chart of [X] by [Y], with an honest caption: total, units, source.”
 Then the twist: “Now draw the misleading version on purpose.”
 Look at both, side by side. THAT is chart literacy.

The caption test — four things, ten seconds

Could a stranger read your chart alone and not be misled? The caption must carry: **total · units · source · full axis**. Then check ONE bar against the table by hand. One bar is enough — the habit protects the whole chart.

The mini-pack (in pairs, 20 minutes)

One scenario, built end-to-end in Claude: summary **table** → one honest **chart** → **five-line memo**. Sign it: *AI-assisted, verified by [your name]*.

The rules never change, whatever the tool or the voice: fictional data in this room · Public — paste from anywhere · The Hidden Scroll of Numbers is open on the dojo — tap its five arcs for plain words pages · anonymise first · Confidential or personal — never · verify — find one thing to fix. **AI drafts. You decide.**

Six Voice Missions — just read, then ask

Every detail below is fictional. Read the script in your own voice and pace — messy is fine. Do Mission 1 together; then pick any two that look like your desk.

Mission 1 · The site visit (task capture)

(1) Open the mic — ChatGPT voice, Gemini Live, or the little mic on your keyboard.

(2)  **Read this aloud** (about 30 seconds, your own pace):

“Thursday morning we have six visitors from the ministry. We need the main meeting room, the projector and the hotspot kit, halal lunch for eight people, and transport from the airport at nine. And someone must print the briefing pack by Wednesday afternoon.”

(3)  **Stop the mic, then ask:**

“Turn this into a task list with owner and deadline columns.”

(4)  **Check** the result against your own words: Count the tasks — there are five. Did “nine” stay a pickup time, and “eight” a lunch count?

(5)  **Fix one thing by voice** (“change ... to ...”) — then you are done.

 Numbers next to each other love to swap jobs. The read-back catches them.

Mission 2 · The phone message (message → email)

(1) Open the mic — ChatGPT voice, Gemini Live, or the little mic on your keyboard.

(2)  **Read this aloud** (about 30 seconds, your own pace):

“Mister Rahman from the training centre called at ten fifteen. The projector for tomorrow is confirmed. But the venue changes from Room Two to the Main Hall. And he needs our final participant number by four o'clock this afternoon.”

(3)  **Stop the mic, then ask:**

“Write a short email to my supervisor: a subject line, what changed, and what we must send by when.”

(4)  **Check** the result against your own words: Three facts must survive: Main Hall (not Room Two), the 4 o'clock deadline, and Mr Rahman's name.

(5)  **Fix one thing by voice** (“change ... to ...”) — then you are done.

 A message you type from memory an hour later loses details. A message you speak in the corridor loses none.

Mission 3 · The expense claim (money in full words)

(1) Open the mic — ChatGPT voice, Gemini Live, or the little mic on your keyboard.

(2)  **Read this aloud** (about 30 seconds, your own pace):

“Roadshow claims. Venue hire, four hundred and fifty dollars, one receipt. Catering, four hundred and eighty dollars, across two receipts. Transport, two hundred and forty dollars. Printing, three hundred dollars. The event was on the twelfth of September.”

(3)  **Stop the mic, then ask:**

“Make a claims checklist: item, amount, number of receipts — then add the total, and the last claiming date under the thirty-day rule.”

(4)  **Check** the result against your own words: Total must be B\$1,470. Last claiming date: 12 October. Count it yourself once.

(5)  **Fix one thing by voice** (“change ... to ...”) — then you are done.

 Always say money in full words — “four fifty” can become 4.50. Full words cannot.

Voice Missions 4 – 6

The pattern never changes: read aloud → one ask → read the result back against your own words.

Mission 4 · The sixty-second minute (meeting → minutes)

(1) Open the mic — ChatGPT voice, Gemini Live, or the little mic on your keyboard.

(2) 📖 **Read this aloud** (about 30 seconds, your own pace):

“Notes from this morning’s meeting. The venue is confirmed for the twelfth. The budget stays at sixteen thousand five hundred dollars. College C is postponed to October — do not print their dates. The flyers were approved at seven hundred and eighty dollars. Next meeting: the first Tuesday of October.”

(3) 🗣️ **Stop the mic, then ask:**

“Draft a formal minute: decisions numbered, actions with owners left as [OWNER] slots for me to fill.”

(4) ✅ **Check** the result against your own words: Five decisions. And is the budget written 16,500 — not 16.5?

(5) 🛠️ **Fix one thing by voice** (“change ... to ...”) — then you are done.

💡 Dictate minutes in the car park, not from memory at your desk tomorrow.

Mission 5 · The store-room count (voice data entry)

(1) Open the mic — ChatGPT voice, Gemini Live, or the little mic on your keyboard.

(2) 📖 **Read this aloud** (about 30 seconds, your own pace):

“Store room count. A-four paper, twelve boxes. Toner, black, three. Toner, colour, zero — order needed. Envelopes, long, two boxes. Envelopes, short, five boxes. Whiteboard markers, one box only. Staples, plenty.”

(3) 🗣️ **Stop the mic, then ask:**

“Turn this into an inventory table: item, quantity, order needed — yes or no.”

(4) ✅ **Check** the result against your own words: Seven rows. Did the zero become an ORDER row? Did “plenty” stay honest (not a number)?

(5) 🛠️ **Fix one thing by voice** (“change ... to ...”) — then you are done.

💡 This is data entry without a keyboard: walk, look, speak. The table builds itself.

Mission 6 · The two-language notice (Malay in, English out)

(1) Open the mic — ChatGPT voice, Gemini Live, or the little mic on your keyboard.

(2) 📖 **Read this aloud** (about 30 seconds, your own pace):

“Mesyuarat pada hari Khamis, sepuluh pagi, di Bilik Utama. Sila bawa laporan bulanan anda. Terima kasih.”

(3) 🗣️ **Stop the mic, then ask:**

“Write this as a short English notice. Then translate your English back into Malay — list anything whose meaning moved.”

(4) ✅ **Check** the result against your own words: Thursday stayed Thursday? Ten in the MORNING? “Sila bawa” still an instruction, not an option?

(5) 🛠️ **Fix one thing by voice** (“change ... to ...”) — then you are done.

💡 Your ear beats the machine on names and days — that is a check only you can do.
