

From a finding to something published

One page. The same sheet for every table — you choose which version fits you today.

Circle one destination: JOURNAL PAPER · POLICY BRIEF · LECTURE OR SEMINAR A paper argues a *contribution*. A brief supports a *decision*. A lecture changes what someone can *do*.

1 Your finding, in one sentence — no causal verb

No "caused", "led to", "because of". Describing is free; attributing needs a design.

2 Who reads this, and what changes for them

Name a role, not an audience. "A director with four minutes". Then: what must they be able to decide, or do, that they could not before?

3 The shape

Destination	The sections, in order
Journal paper	question · what is known · what you did · what you found · what it means · limitation
Policy brief	the decision at stake · three findings with source pages · one option rejected · recommendation
Lecture	five slides, each title stating the takeaway · three bullets maximum · one speaker note each

4 Every number, and where it came from

A figure with no source in your own material is a guess dressed as a fact. If a number is not in this table, it does not go in the draft.

Number	Source, year, page	Checked by me?
--------	--------------------	----------------

5 The disclosure sentence — write it before the deadline panic

The [DRAFT / ANALYSIS / TEACHING MATERIAL] was prepared with AI assistance ([TOOL]) for [WHAT IT DID]. All [FINDINGS / FIGURES / CITATIONS] were verified by the author, who takes full responsibility for the content.

A detection is not proof — which is exactly why you declare it first, in your own words.

6 The one objection you kept

About cost, or about whether this can actually be done. A page with no visible weakness reads as a page written by someone who did not look.

Before it leaves your desk

☐ Every number traced to a source ☐ Every citation opened at least once ☐ The disclosure sentence written ☐ One weakness still visible ☐ Read once by a person who was not in the room
