

Gemini Notebook — your grounded librarian

The tool that answers *ONLY* from documents you give it — and shows you where it found every answer.

notebook.google.com

Why this tool is different

ChatGPT, Gemini and Claude answer from everything they ever learned — brilliant, but they can invent. **Gemini Notebook answers only from the sources YOU upload**, and every answer carries a small number linking back to the exact passage. You already met one: **Ask the Librarian** on the dojo page is a Gemini Notebook filled with this workshop's handouts.

One honest warning: grounded does not mean true. If a source is wrong, the answer repeats it — confidently, with a citation. The ten-second check never retires. *Semak dahulu, baru percaya.*

Getting started (five minutes)

1. Go to **notebook.google.com** (scan the QR) → sign in with your Google account. Free.
2. Tap **New notebook** → **Add sources**: PDFs, Google Docs, slides, or website links. Start with one public report — the Brunei Economic Outlook 2026 from the Dojo Library is perfect.
3. Ask a question in the chat box. Notice the little numbers in the answer — tap one and it opens the exact passage in your source. That is the whole magic.

First question to try: "What are the three findings a director would quote from this report — with the page for each?"

Three habits that make it work

- **Feed it well.** The notebook is only as good as its shelves — a few relevant documents beat fifty random ones.
- **Save what you like.** Answers are conversations; if one is worth keeping, copy it out or save it as a note before you move on.
- **Changed a source?** Remove the old file and add the new one — then regenerate anything built from it. Old outputs do not update themselves.

The rules follow you here too: your own or public documents — freely · internal — anonymise first · confidential or personal — never. "Answers only from my sources" does not change WHERE the sources go: it is still a cloud tool.

The Studio panel — nine buttons

Open any notebook and look right: **Studio**. Each button turns your sources into something new. Generating takes a few minutes — start it, make tea, come back.

Audio Overview

Turns your sources into a short podcast-style conversation between two voices. You can ask for a style — the dojo's recap audio is a **Debate** made exactly here.

Try: Add a long report → a five-minute discussion for the drive home.

Video Overview

A narrated video summary of your sources — pictures, captions and a voice, built automatically.

Try: A briefing for colleagues who will not read the document but will watch three minutes.

Slide deck

Drafts a slide deck from your sources. Titles, bullets and structure come out; your judgement and polish go in.

Try: The starting point for next week's presentation — then apply the “one message per slide” rule yourself.

Mind Map

A clickable branch map of the topics inside your sources. Tap a branch and ask about just that part.

Try: Open a 55-page report as a map first — see its shape before you read a page.

Reports

Structured written documents built from your sources — briefings, study guides, summaries in different shapes.

Try: A one-page briefing of three long documents — then verify one fact per page against the source.

Flashcards

Question-and-answer cards made from your sources, for practising until it sticks.

Try: Turn your office's procedures manual into training cards for new staff.

Quiz

Self-test questions with answers, drawn only from your sources. Your Morning Scroll Challenges were born this way.

Try: Five questions from any training handout — recalling is the training.

Infographic

A one-page visual summary of your sources — the poster version of the report.

Try: The notice-board version of your annual report. Check every number it prints.

Data table

Pulls structured comparisons out of your sources into a tidy table.

Try: Three supplier quotes in → one comparison table out — then verify line by line.

The dojo's open secret

Everything “magical” in this workshop came from these nine buttons plus the arts you learned: the recap audio (Audio Overview, Debate style), the morning quizzes (Quiz), the Librarian itself (a shared notebook). **Nothing here is beyond you — the buttons are now yours.** Whatever a button produces, one habit stays: verify one thing before you trust it, and sign what you send on.
